25% Glass filled 1.5 to 4mm - price on application
Etched one side 1 to 12mm - price on application

Polytetrafluorethylene (PTFE) sheet is available in white in a range of sizes and thicknesses. PTFE is noted for its remarkable temperature range (-200°C to +260°C) and its extremely low coefficient of friction

PTFE sheet is also available in 25% glass filled on application. Glass fillers improve wear resistance, decrease deformation under load and reduce thermal expansion.
